07 PSAM

Purchase secure access module can be specially adopted in bank system to realize security access of relative authentication for personal back card and terminals. It supports multi-key dispersion mechanism and the key that has been dispersed can be used as temperary key for data encryption, decoding and MAC calculation. Futhermore, classified informarion and its integrity can be protected.

08 USB CONNECTION

C6000 can be connected with PC or laptop through USB port for synchroniza-tion. There are three options can be selected for user's requirement.

USB related precautions:

- Please connect to the USB port on the back of the PC.
- Please do not use USB extension line or USB hub.
- Please do not share with other USB devices.

Battery related precautions:

- Please charge the battery only with original adapter.
- If the battery is unused for an extended period, the over discharge situation will lead to the decrease of battery capacity and battery life, the increase of the internal resistance, and battery bulge etc.
- If the battery is unused for an extended period, to avoid over discharge, please keep the battery level at 40% to 60% and store at room temperature. And charge the battery once every 3 months.
- If the storage time is more than one year, one charge cycle to activate the battery every year is recommended.
  (One charge cycle is a period of use from fully charged, to fully discharged, and fully recharged again.)
- The estimated life of the battery is 300 charge cycles, after reaching this limit, the capacity is expected to shrink.
